SOFTSHELL

Indicates a category of **technical fabrics** designed to ensure maximum comfort in situations of variable weather. This is made possible thanks to its **3-layer** heat sealed structure:

- a very **dense** and **elasticized polyester outer fabric**, which makes the garment **windproof** and **water-repellent**
- an **intermediate waterproof breathable membrane** that has the task of blocking the passage of rain and at the same time allowing moisture to escape
- **inner layer in perforated jersey** to increase **warmth**.

The jackets are **waterproof up to 5000 mm** of water columns. Under normal conditions, the rainwater pressure fluctuates between 1000 and 2000 mm, above 5000 mm the material offers excellent levels of water resistance.

CITY SOFTSHELL

Responsible Wool Standard (RWS) ensures that sheep are treated with respect and it also guarantees best practices in the management and protection of the land.

The Global Recycled Standard (GRS) is promoted by Textile Exchange, which recognizes the importance of recycling for a sustainable production and consumption.
